

# Exemption from MPE Evaluation

FCC ID: VRSS2317HWIB

IC : 8729A - S2317HWIB

To whom it may concern,

Dell UltraSharp S2317HWib is embedded with wireless power transfer. Pursuant to KDB 680106 D01 v02 and RSS-216 issue 1, it meets the requirements indicated in section 5.2 b) and could be excluded from KDB inquiry.

a) Power transfer frequency is less than 1 MHz

The transfer frequency is below 1MHz.

b) Output power from each primary coil is less than 5 watts

The device has output power is less than 5 watt.

c) The transfer system includes only single primary and secondary coils. This includes charging systems that may have multiple primary coils and clients that are able to detect and allow coupling only between individual pairs of coils

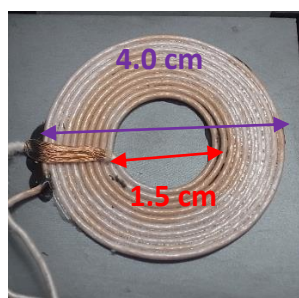

The device has single coil.

d) Client device is inserted in or placed directly in contact with the transmitter

The EUT is a charge pad, user shall place client device directly in contact with the transmitter.

e) The maximum coupling surface area of the transmit (charging) device is between 60 cm<sup>2</sup> and 400 cm<sup>2</sup>

The max coupling surface area is 10.86 cm<sup>2</sup>.

f) Aggregate leakage fields at 10 cm surrounding the device from all simultaneous transmitting coils are demonstrated to be less than 30% of the MPE limit.

The aggregate leakage field is less than 30% of limit. Please refer to MPE.
